NEW CUTTING-EDGE EQUIPMENT

JVI'S LATEST INVESTMENT IN QUALITY & SPEED

CUTTING EDGE 8-COLOR PRINTER

There is a breakthrough in dye sublimation technology that is soon to be disrupting the industry setting the stage for unrivaled performance. JVI has just invested in the Panthera S4-3.2m-8. It is the first grand-format printer in the dye sublimation industry to offer unprecedented photographic quality with 8-Color ink configuration.

Using 8-Color ink configuration results in significantly enhancing the overall outcome – colors are more vivid and crisp as the graininess that may be present in 4-color ink processing completely disappears. By creating a higher ink density/saturation level, the resolution is greatly increased. Colors are more vibrant, blacks are richer and deeper, and images are sharper, down to the finest detail producing improved quality for backlit and high-image-quality displays. At 126" wide (10 ft. 6") by almost any height allows for most grand format displays to be finished without seams. The Panthera S4 provides the highest printing quality of any dye sublimation solution available today at speeds of more than 2,000 square feet per hour with two passes.

In the Fall of 2018 JVI invested in the Panthera S4-3.2m and was blown away with the production throughput rates. The 8 Color Panthera will ship to JVI in October. It will be the first installation in the USA.

ADVANTAGES FOR JVI CUSTOMERS

- 8-Color Ink System
- 126" Wide
- Brighter Vibrant Colors
- Richer and Deeper Blacks
- Sharper Images
- Improved Quality for Back Lit Visuals
- Remarkable Photographic Quality

PRODUCTION ADVANTAGES

- Print up to 2,000 sqft/hr in 8-color ink configuration.
- Precise - An accurate print head controller offers better precision and printing quality.

"I'm already impressed with how well the Panthera S4 performs. Bringing on another Panthera that features 8-color processing is a no brainer, and will set JVI apart as we continually explore ways to enhance our capabilities and ensure we're on the cutting edge of new technology," states John Whitt- CEO of Just Vision It. Whitt continued, "Once in a generation you see advancements that can completely change an industry. It's simply astonishing to be able to introduce an 8-color high-quality print mode and have the speeds to support it."

Just Vision It (JVI, justvisionit.com, jvicommercial.com), is an established dye sublimation manufacturer specializing in custom fabrication of soft signage, tradeshow booths, and event marketing.
